The line graph illustrates the number of [] to three major [] in London over a ten-year []. Overall, [] to all institutions rose during this period, though individual [] varied considerably.

The British Museum maintained the highest [] throughout the decade, starting at 5 million [] and reaching approximately 6 million by 2020. In contrast, the National Gallery experienced more dramatic growth. [] to this institution climbed steadily from 4 million, peaking at 7 million in 2019 before declining slightly to 6.5 million in the final [].

The V&A Museum showed the most volatile pattern. [] remained relatively flat for the first five years at around 3 million, then surged dramatically in the latter half of the []. By 2020, [] had overtaken the Natural History Museum, reaching 5.5 million.

In summary, while all three [] attracted growing numbers of [], the patterns of growth differed significantly.

Band 7+: never repeat 'visitors' twice in a row – the examiner is counting.

Coffee and Tea Consumption

Coffee and tea consumption in five countries, 2010–2020

Complete the response

The graph shows [] of coffee and tea in five countries between 2010 and 2020. Overall, [] of both [] increased across all nations, with coffee demonstrating more pronounced growth than tea.

In 2010, [] in the UK consumed approximately 2.5 kg of coffee annually, while tea [] stood at 1.8 kg. By 2020, coffee [] had risen to 3.2 kg per capita, representing a 28% increase. Tea consumption, meanwhile, remained relatively stable at 1.9 kg, showing only marginal growth throughout the [].

Germany and Italy displayed contrasting patterns. Italian [] favoured coffee heavily from the outset, with [] climbing from 5.5 kg to 6.8 kg. German [], by contrast, preferred tea, consuming only 1.2 kg of coffee but 2.1 kg of [] by the end of the [].

France occupied a middle position, with [] of both beverages rising moderately. By 2020, French [] consumed 3.8 kg of coffee and 1.5 kg of tea annually.

☞ *'Consumption' is your safest all-rounder – but don't let it appear in every sentence.*

Internet Usage by Age Group

Internet access by age group in the US, 2005–2020

Complete the response

The line graph presents the percentage of [] accessing the internet across four age [] in the United States from 2005 to 2020. Overall, [] increased substantially across all demographics, with younger [] demonstrating near-universal access by the end of the period.

In 2005, only 58% of [] aged 18–30 had internet access, while [] aged 65+ showed significantly lower [], at just 12%. This gap narrowed considerably over the following years.

By 2020, nearly 95% of younger [] were online, whereas [] in the oldest category reached 67%, representing a five-fold increase over this fifteen-year period. The 31–50 age bracket showed steady growth, rising from 65% in 2005 to 88% by 2020.

Middle-aged [] adopted the technology more gradually than their younger counterparts but substantially faster than [] aged 65+. The most dramatic shift occurred after 2015, when [] among older [] accelerated sharply. This acceleration suggests that digital literacy initiatives and easier technology interfaces encouraged [] in traditionally under-connected demographics.

Careful – 2005 to 2020 is fifteen years, not a decade. Examiners check your maths too!

Car Sales by Model

Car sales by fuel type across Europe, 2012–2022

Complete the response

The graph illustrates [] of three car [] across Europe from 2012 to 2022. Overall, [] experienced significant fluctuations, with hybrid vehicles showing the most dramatic growth, while traditional petrol cars declined steadily.

In 2012, petrol cars dominated the market, accounting for 4.2 million [] annually. Diesel vehicles followed closely at 3.8 million units, while hybrid [] represented a negligible fraction at just 0.3 million. However, this pattern shifted dramatically over the subsequent [].

By 2018, hybrid sales had surged to 1.5 million, tripling over a six-[] span. Simultaneously, petrol [] fell to 3.1 million and diesel vehicles plummeted to 2.2 million. This reversal reflects changing consumer preferences and stricter emissions regulations affecting traditional fuel [].

The final four years saw continued [] in hybrid vehicles. By 2022, hybrid [] had reached 3.8 million, surpassing both petrol and diesel models. Petrol car [] stabilised at 2.5 million, while diesel vehicles dropped to just 1.2 million, marking a historic low.

'Sales', 'units', 'volumes' – rotate these instead of repeating 'sales' nine times.

Complete the response

The line graph compares [] growth in three major [] over a twenty-year period from 2000 to 2020. Overall, all three urban areas experienced significant expansion, with rural-to-urban [] driving substantial increases in [] across the regions.

In 2000, City A had 2.1 million [], while City B and City C had 1.8 million and 1.2 million respectively. City A maintained steady [] throughout the period, reaching 3.5 million by 2020. This consistent upward trajectory reflects City A's status as the primary economic hub, attracting [] seeking employment and better living standards.

City B experienced more pronounced []. Numbers rose from 1.8 million to 3.2 million, with the acceleration coinciding with infrastructure improvements and industrial development. The rapid [] of residents in City B outpaced City A during the second decade.

City C, the smallest [] initially, demonstrated the most dramatic percentage increase. Numbers nearly tripled from 1.2 million to 3.0 million by 2020. This remarkable surge reflects intensive urbanisation as [] migrated from rural areas seeking better opportunities.

↳ 'Urbanisation' – with an s. British English keeps the s, not z, in words like this.
